

We hope you all had a restful break. Year 3 have come back from the holidays and worked hard on their learning!

In Maths we have completed our unit on addition and subtraction skills. We continued to add and subtract 3 digit numbers using exchanging and carrying. We have just started our new unit on multiplication which has seen us describe equal groups and calculate their total amounts.

In English, we have started our non-chronological reports about events in Gloucester. We started by reading a report about Pakistan and using it to identify the features. We have then story mapped the text and researched our own events that have happened in Gloucester. After that, we used our new facts to plan our non-chronological report about Gloucester and have written the introduction and first paragraph.

Science has seen us begin our learning about our new unit Animals and Humans. We started by looking at the different nutrients humans need to keep themselves healthy. In Geography we have learnt about Tsunamis and the devastating effects they have had in Pakistan. We then moved onto learning about earthquakes, how they happen and their effects. We even compared the strengths using a Mercalli meter!

In History we have looked at significant people from Gloucester and Pakistan and have made sets of Top Trump cards! In PSHE we acted our scenarios of conflict and discussed ways in which we could solve them.

PE has seen us begin working on our balancing and travelling skills as part of our gymnastics unit! The children have loved exploring how to move and travel and using different parts of their bodies to balance.

What we are learning next

In English we will continue to write our non-chronological reports about events in Gloucester. In Maths we will continue to develop our understanding of multiplication and we will work towards multiplying 2 digit numbers together.
